RUGGED, ECONOMICAL TWIN STAGE ENGINE DRIVEN WATER TRANSFER PUMP

FEATURES & BENEFITS

- **Driven by either a Honda GX160 or a Honda GX200 engine** which is specially designed for domestic or infrequent use. The GX200 engine is also available in electric start.
- **Patented clamped impeller design** to enable longer impeller life, improved performance and easier disassembly in the case of blockage.
- **Twin impeller design** provides extra strong pressure for longer and higher pumping applications.
- **Thrust balanced impeller design** to extend engine life.
- **Pump casing, diffusers and impellers manufactured from quality corrosion resistant marine grade aluminium** for long life.
- **Polyester coated pump casing, exterior and interior,** for added corrosion resistance.
- **Patented floating impeller neckrings front and back.** The front neckring helps improve pumping efficiency, the back neckring helps extend seal life and dramatically reduce engine wear.
- **Self priming from 6m** for more versatile installation options.
- **Large priming and drain port with bayonet fit plugs.** Plugs have safety retention system, plus are available with 1/4" tapping to accept pressure gauges or drain cocks.
- **Low-oil protection on all models - engines won't start or run if oil level is inadequate,** thus protecting your engine.
- **Electric start models have electric starter (battery and leads required) and recoil starter fitted,** ensures a choice of starting methods, even if the battery is flat or removed.
- **"HV" models come with Viton® seal, orings, gaskets, caps etc. fitted** for improved chemical resistance. (Please seek specialist advice from chemical supplier if pumping chemicals. Use of aggressive chemicals may void warranty.)
- **All engines conform to the tough environmental requirements of the USA EPA, CARB and the proposed Australian Emissions Standards,** to help look after the environment.
