

# Irribiz Fertigation Tanks and Agitators

Our fertiliser tanks are roto-moulded and made of high quality poly. They have a smooth internal surface, no loose fibres or harmful substances. They are light-weight, resilient and easily relocated if required. All tanks have a sloping bottom that fit the purposely built sloping base. An optional lid is available with an access hatch.

### Specifications

- Volume: 4,300 litres
- Diameter : 2300 mm
- Rim Height (when on base) : 1040 mm

Our agitators are designed to mix and agitate liquid and water soluble fertilisers into irrigation water. They are available in clamped or flanged mounted configuration and designed with 3 spouts to produce rotation and 3 to stir at the bottom. They have a direct stainless steel transmission shaft.

The Fertic Electric Turbine Agitators have a compact design and solid construction which translates in minimal moving and wearing parts. Its materials are chemically resistant throughout all parts that come in contact with the fertiliser.
