

EFFICIENT CLUSTER SUPPORT

Optima J - Double Cluster Support, 560j3-19

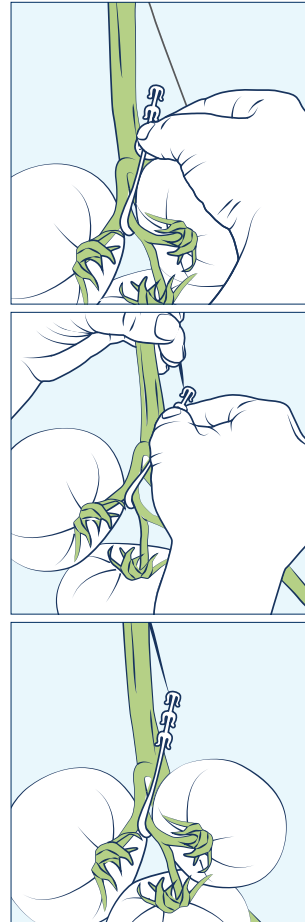

When heavy tomatoes are grown, the truss can be damaged from the carrying weight. Unfortunately, this problem cannot be prevented at an early stage.

Cluster support can be used during the growth period, mainly for tomato varieties with heavy clusters.

Using the Optima J - Double Cluster Support helps to maintain the healthy development of tomatoes, by ensuring the transport of water, nutrients and carbohydrates without the stem bending or breaking.

Advantages

- Specially designed for heavy cluster tomatoes in order to prevent stem damage
- Quick and easy to attach
- Adapted to different growing methods
- Lightweight
- Providing strong and long-lasting support
- Different shapes to facilitate attachment

Instructions for use

- Attach one side to the cluster and connect the other side to the twine
- Use one hook for each cluster
